PROFESSIONAL SUMMARY

Versatile and results-driven IT professional with a strong foundation in computer science, software development, and cybersecurity.

Pursuing an M.S. in Cybersecurity at New York University with a B.S. in Computer Science from the University of Minnesota – Twin Cities.

Experienced in designing and implementing full-stack web applications, developing low-level system programs, managing databases, and securing networks.

Proficient in C, C++, Python, JavaScript, SQL, and web technologies. Adept at problem solving, collaborative teamwork, and communicating complex technical concepts.

Passionate about building reliable, secure, and user-friendly systems.

EDUCATION

New York University (NYU)

M.S. in Cybersecurity | Expected 2027

Relevant Coursework: Software Security, Secure Systems Architecture, Network Security, Data Structures, Operating Systems

University of Minnesota – Twin Cities

B.S. in Computer Science | 2023

Concentrations: Cybersecurity, Web Development

TECHNICAL SKILLS

- Programming Languages: C, C++, Python, JavaScript, SQL, HTML/CSS
- Frameworks & Libraries: Node.js, Express, React, Flask
- Database Technologies: MySQL, SQLite, Database Design & Normalization
- DevOps & Tools: Git, Docker, Linux, Windows, Visual Studio Code, Jupyter, CI/CD concepts
- Networking & Security: Network protocols, firewall/iptables, SIEM basics, penetration testing, secure coding practices, reverse engineering
- Other: Algorithm design, data structures, object-oriented programming, agile development, technical documentation, public speaking

PROJECTS

Incident Reporting System | ASP.NET, MySQL, .NET

Designed and developed a full-stack incident reporting platform enabling users to submit

reports, and analysts to transform them into incidents.

Implemented role-based access controls, secure RESTful APIs, database normalization (BCNF), and a web interface with dynamic components.

Separated frontend, application server, and database layers to ensure scalability and security.

HTTP Server with Edge Case Handling | C++

Developed an HTTP server for a programming course that handles GET/POST requests, parses forms with input validation, and logs access and error messages.

Implemented SQL injection mitigations, cross-site scripting protections, and robust error handling to meet and exceed project requirements.

Dynamic Record Management System | C

Built a system that dynamically manages records using pointers, manual memory allocation, and safe deallocation.

Provided CRUD operations, capacity management, and time complexity analysis, demonstrating understanding of low-level programming and data structure implementation.

Reverse Engineering Challenge | C, x86 Assembly

Reconstructed high-level logic from x86 assembly code, solving an engineering challenge that required encryption/decryption functions and assembly analysis.

Enhanced understanding of computer architecture, compilation, and binary exploitation.

Node.js Application with Docker | Node.js, Docker

Containerized a Node.js application using Docker, configuring environment variables, dependencies, and Dockerfiles.

Learned container lifecycle management, image creation, and deployment strategies for scalable web applications.

Network Security & Firewall Labs | Linux, Docker, iptables

Configured multi-network Docker lab environments with routing and stateful firewall rules. Practiced network segmentation, implemented access controls using iptables, and analyzed traffic for anomalies.

Applied security principles to design secure network architectures and improve defensive measures.

EXPERIENCE

Starbucks | Barista

Worked in a fast-paced retail environment delivering excellent customer service, managing transactions, and collaborating with team members.

Developed interpersonal skills and the ability to prioritize tasks under pressure.

University of Minnesota | Desk Assistant

Provided technical support and information to students, visitors, and staff.

Assisted with administrative tasks, improving organizational skills and attention to detail.

LEADERSHIP & ACTIVITIES**Gopher Hack | Former Vice President**

Led a cybersecurity student organization, organized events and workshops, and promoted collaborative learning on topics such as penetration testing and network security.

Facilitated discussions on secure coding, ethical hacking, and career development for members.

- Participated in TryHackMe training labs covering web exploitation, network scanning, and privilege escalation
- Engaged in coding contests and hackathons, developing problem-solving and algorithmic skills
- Volunteer language translator and tutor; fluent in Portuguese and English, comfortable working with multicultural teams
